

Amelia Planation Master Community Sprinkler Watering Days and Time.

The times indicated are current as of January 24, 2026. It needs to be understood the times indicated may not be accurate at all times due to service repairs and/or request for watering time adjustments by a homeowner.

The APPOA is responsible to deliver water to each lot and maintenance of all decoders, valves, and solenoids within the sprinkler termination boxes at the back corner of lots.

Each homeowner is responsible for maintaining/servicing the sprinkler pipe and heads on their property. Homeowner's have to make their own repairs and/or adjustments to sprinkler-heads on their own property. Service providers that can assist in assessing and making repairs are Robert "The Tree Guy" Schneider (772) 834-1047, Stellar Sprinklers / Shawn McDonald (772) 708-8357.

The Hunter ACC2 is setup to use the Hunter Cycle & Soak feature, which provides water in short increments. Due to Amelia Planation lots having hard clay under layer, which doesn't allow water to percolate properly, and creating runoff, the Cycle & Soak feature assists in allowing grass and plants to receive consistent water and the opportunity for the water to be absorbed. The 1st watering cycle of a given station/zone is 15 mins. If the Total Watering Time is 30 mins., on the below schedule, then there is 1 additional 15 mins. of watering time, Cycle #02. If the Total Watering Time is 45, mins., then there is 2 additional 15 mins. of watering times Cycle #02 and #03. If the total watering time is 15 mins. or less, there is no additional watering Cycle. Meaning the station/zone only receives watering as indicated in Cycle 1.

Contact **Joe Taglione (518) 339-0846** to **request the Hunter ROAM XL radio transmitter/receiver** if you would like to test or service your sprinkler heads within your yard.

Note: **APC** = Amelia Plantation Ct., **FM** = Francis Manor, **MP** = McRae Place. **Rotor** = sprinkler heads that rotate and cover the grass are within a yard, **Spray** = popup sprinkler heads that typically cover plant beds, **Mixed** = the station/zone has both types of sprinkler heads, covering the grass and plant beds.

Program #01 - Starts @ 9:00 pm on Cycle #01 and moves from Station/Zone to Station/Zone through all Cycles & Times as indicated watering overnight and finishing the next morning.
